The present invention relates to a novel receptor, referred to as RANK CC (receptor activator of NF (nuclear factor)-kappaB), a member of TNF CC (tumour necrosis factor) receptor superfamily. RANK is a Type I CC transmembrane protein that interacts with TNF receptor associated CC factors (TRAFS) Triggering of RANK by overexpression or co-expression CC of RANK and membrane bound RANK ligand (RANKL) results in upregulation CC of the transcription factor NF-kappaB, a ubiquitous transcription factor CC inhibition of NF-kappaB by RANK antagonists is useful in ameliorating CC negative effects of inflammatory reactions, and the effects of excess CC bone resorption. The RANK DNAS, proteins and their analogues are useful CC for the preparation of pharmaceutical compositions, for infecting target CC associated with RANK, and as targets for use in screening assays. They CC may be used in the treatment or diagnosis of immune system dysfunction. CC The present invention also encompasses gene therapy methods to correct CC gene-activating mutations, associated with e.g. familial expansile CC osteolysis (FEO) and early onset Paget's disease of bone (EP). The CC present sequence is a CDNA encoding murine RANKL (muranKL) protein.
                                                                                                                                                                                                                                                                                                   Query Match

agents

(particularly

```
intracellular proteins); to raise Ab (useful in immunoassays for detection of OPG binding protein) and to identify compounds that modulate binding of OPG binding protein to osteoclast differentiation and activation receptor (ODAR). The nucleic acid molecule encoding OPG binding protein can be used to detect OPG binding protein-encoding sequences, e.g. screening for related sequences, also to produce transgenic animal models, while complementary sequences are used for antisense regulation of OPG binding protein expression. Modulators of OPG binding protein, particularly soluble forms of OPG binding protein or Ab, are used to treat or prevent bone diseases, e.g. osteoporosis, bone loss caused by arthritis or metastases, hypercalcaemia, Paget's disease, periodontal disease, osteoporosis, loosening of prostneses, optionally in combination with agents that promote bone growth.

```

The present sequence encodes a murine osteoprotegerin ligand (OPGL).

CO Steoprotegerin is a secreted member of the tumour necrosis factor receptor family, which blocks osteoclastrogenesis in a dose dependent common the open protein is synthesised as a type II transmembrane protein. The OPGL protein is synthesised as a type II transmembrane composed protein. The murine and human OPGL polypeptides are 87% homologous. OPGL is a potent osteoclast differentiation factor when combined with CSF-1. CI is not capable of inducing osteoclast differentiation in the absence cof CSF-1. OPGL is also an activator of mature osteoclasts. The cof CSF-1. OPGL is also an activator of mature osteoclasts. The cof CSF-1. OPGL is also an activator of mature osteoclasts. The cof CC opGL activity in an animal. The method comprises using at least one OPGL oplypeptide or subsequence, and/or at least one OPGL analogue to induce an immure response in the animal. The method and OPGL polypeptide are cuseful for treating, preventing and ameliorating osteoporosis or other of diseases or conditions characterised by excessive bone resorption. Sequence 2299 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1734
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1674
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1614
This is the nucleotide sequence encoding the mouse 499E9 protein, used in the method of the invention to treat conditions associated with abnormal physiology or development. The 499E9 protein is expressed highly on polarised Th1 T cells, binding of 499E9 to its receptor may result in either immune cell expansion or apoptosis. Antagonists of 499E9 may be used to modulate immune responses in abnormal situations, e.g. autoimmune disorders including rheumatoid arthritis, systemic lupus erythematosus, Hashimoto's autoimmune thyroiditis, as well as acute inflammatory responses in which T-cell expansion, activation or immunological T-cell memory play an important role. The antibodies can be used to raise anti-idiotypic antibodies which will be useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1794
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1561

Human or murine TRANCE polypeptides or their variants, fragments, derivatives or analogues may be used as modulators of immune response in a mammal comprising, antisense sequences to TRANCE and fusion proteins comprising human and/or murine TRANCE. Agonists and antagonists of TRANCE, can be used to modulate immune response by increasing or decreasing the life span of mature dendritic cells and increasing or decreasing T cell activation. These techniques are especially useful for treating immune system related conditions such as HIV, cancer, autoimmune disease or hypersensitivity to an allergen. The TRANCE polypeptides can be used to increase the viability of dendritic cells in vivo or in vitro, especially when used in conjunction with proteins of the tumour necrosis factor (TNF) superfamily (especially

                                                           The present sequence encodes an osteoclastogenesis inhibitory factor (OCIF)-blinding molecule (OBM). The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTH). OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins then affinity chromatography using OCIF. It exists in a full-sequence form and a solubilised form (sOBM) which is a shorter chain. OBM may be used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein, for investigative and diagnostic purposes, and as

                     The present invention describes a genomic DNA encoding a protein having an activity of supporting or promoting differentiation and maturation of osteoclasts. The genomic DNA encoding a protein has the following properties: (a) combines specifically with osteoclastogenesis inhibitory factor (OCIF) and has a high affinity; (b) shows a molecular weight (mw) of 30,000 to 40,000 by SDS-PAGE (sodium dodecyl sulfate-polyacrylamide gel electrophoresis) under a nonreductive condition and the apparent mw when crosslinked with monomer type OCIF is 90,000 to 110,000; and (c) has an activity of supporting or promoting differentiation and maturation of osteoclast in the co-culture of mouse osteoblast-like stroma cell and mouse spleen cell in the presence of a bone absorption promoting factor such as active type vitamin D3 and parathyroid hormone (PTH). The protein can be used as a drug-and a research reagent. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mouse; osteoclastogenesis inhibitory factor binding molecule; OBM; osteoclast; bone absorption promoting factor; vitamin D3; parathyroid hormone; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1509

CC The present sequence encodes a human osteoprotegerin ligand (OPGL).

CC Osteoprotegerin is a secreted member of the tumour necrosis factor creceptor family, which blocks osteoclastogenesis in a dose dependent CC manner. The OPGL protein is synthesised as a type II transmembrane CC protein. The murine and human OPGL polypeptides are 87% homologous. OPGL is a potent osteoclast differentiation factor when combined with CSF-1. CC in the not capable of inducing osteoclast differentiation in the absence CC of CSF-1. OPGL is also an activator of mature osteoclasts. The Specification describes a method for the in vivo down-regulation of CC OPGL activity in an animal. The method comprises using at least one OPGL cativity in an animal. The method and OPGL polypeptide are useful for treating, preventing and ameliorating osteoporosis or other CC diseases or conditions characterised by excessive home recommend.

The present sequence encodes human osteoprotegerin (OPG) binding protein. CC Host cells transfected with vectors containing nucleic acid molecules concoding OPG binding protein are used to produce recombinant OPG binding protein. OPG binding protein is used in binding assays to determine cc protein. OPG binding protein is used in binding assays to determine cc planting agents (particularly agonists and antagonists, including continuing cc intracellular proteins); to raise Ab (useful in immunoassays for cc detection of OPG binding protein) and to identify compounds that modulate binding of OPG binding protein to osteoclast differentiation cc and activation receptor (ODAR). The nucleic acid molecule encoding CC binding protein can be used to detect OPG binding protein-encoding CC sequences, e.g. screening for related sequences, also to produce transgenic animal models, while complementary sequences are used for CC opg binding protein, particularly soluble forms of OPG binding protein complementary sequences are used for OPG binding protein, particularly soluble forms of OPG binding protein complementary sequences are used to treat or prevent bone diseases, e.g. osteoporosis, cc disease, periodontal disease, osteoporosis, loosening of prostheses, optionally in combination with agents that promote bone growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
                   an osteoclastogenesis inhibitory factor (OCIF) binding molecule (OBM). The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTH). OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins then affinity chromatography using OCIF. It exists in a full-sequence form and a solubilised form (sOBM) which is a shorter Chain. OBM may be used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein, for investigative and diagnostic purposes, and as

factor; vitamin D3;
                                                                                              it
```

The present invention describes a genomic DNA encoding a protein having an activity of supporting or promoting differentiation and maturation of osteoclasts. The genomic DNA encoding a protein has the following properties: (a) combines specifically with osteoclastogenesis inhibitory factor (OCIF) and has a high affinity; (b) shows a molecular weight (mw) of 30,000 to 40,000 by SDS-PAGE (sodium dodecyl sulfate-polyacrylamide gel electrophoresis) under a nonreductive condition and the apparent mw when crosslinked with monomer type OCIF is 90,000 to 110,000; and (c) has an activity of supporting or promoting differentiation and maturation of osteoclast in the co-culture of mouse osteoblast-like stroma cell and comouse spleen cell in the presence of a bone absorption promoting factor such as active type vitamin D3 and parathyroid hormone (PTH). The protein can be used as a drug and a research reagent. The present sequence cencodes a mouse OCIF binding molecule (OBM) from the present invention. Sequence 1, Application US/08989362
Patent No. 6242586
GENERAL INFORMATION:
APPLICANT: Gorman, Daniel M.
APPLICANT: Matteon, Jeanine D.
TITLE OF INVENTION: Mammalian Cell Surf
TITLE OF INVENTION: Reagents
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: DNAX Research Institute
STREET: 901 California Avenue
                                                                                                              RESULT 6
US-08-989-362-1
                                                                                                                                                                                      밁
                                                                                                                                                                                                      Ş
                                                                                                                                                   밁
                                                                                                                                                                 Ş
